The polygalacturonase gene promoter is active in at least the breaker through red fruit stage in tomato fruit, and can be used in a novel method of the invention for producing a plant with an altered phenotype. In this method, regulatory regions from genes expressed during a particular developmental stage or in a specific tissue are identified by cDNA screening. The regulatory regions are manipulated for use with foreign sequences for introduction into plant cells to provide transformed plants having a phenotypic property that can be modulated. The invention is exemplified with light, seed and fruit-specific promoters. Transformation without gall formation of cells which are not Agrobacterium hosts, especially cereals and legumes, is achieved. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 2207 BP; 870 A; 282 C; 270 G; 784 T; 0 U; 1 Other;

This is the nucleotide sequence of a tomato polygalacturonase genomic DNA Clone isolated from a genomic library by screening with polygalacturonase CDNA. The polygalacturonase gene promoter is active in at least the CC breaker through red fruit stage in tomato fruit, and can be used in a CC breaker through red fruit stage in tomato fruit, and can be used in a CC phenotype. In this method, regulatory regions from plant genes (and T-DNA CC and Ti or Ri plasmids) are manipulated for use with foreign sequences for introduction into plant cells to provide transformed plants having a CC phenotypic property that can be modulated. The invention is exemplified CC with light, seed and fruit specific promoters. Also claimed are methods CC with light, seed and fruit specific promoters. Also claimed are methods CC characteristic to fruit, modifying transcription in fruit tissue, modifying the phenotype of a plant to impart a desired characteristic to fruit, modifying transcription in fruit tissue, and CC expressing a heterologous DNA sequence of interest specifically in fruit CC plants which have historically not been Agrobacterium hosts. (Updated on CC 25-MAR-2003 to correct PR field.)
